**NP:** in case that a species is no longer present in the site enter: x (optional)

**Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

**Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

**Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

**Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

### Other Site Characteristics

Espacio marino junto a la franja costera del suroeste de la isla de Gran Canaria. Tanto el fondo como la costa aledaña se caracterizan por su naturaleza volcánica basáltica, así como por presentar grandes acantilados, jalonados de playas en las desembocaduras de los barrancos.

### 4.2 Quality and importance

La costa asociada a este espacio marino alberga una importante colonia de pardela cenicienta (*Calonectris diomedea*), y además está presente como reproductor el petrel de Bulwer (*Bulweria bulwerii*). Esta zona marina es utilizada por las aves en sus desplazamientos a las zonas de alimentación, así como durante sus movimientos migratorios. En ocasiones también es utilizada como zona de alimentación en sí misma.
